WARNING
ABOUT THIS GUIDEBOOK
Read before using this guidebook

Warning

This guidebook is a compilation of unverified information gathered from many different climbers.

The author cannot ensure the accuracy of any of the information in this book, including topos and route descriptions, difficulty ratings, and protection ratings.

These may be incorrect or misleading, as ratings of climbing difficulty and risk are always subjective and depend on the physical characteristics (for example, height), experience, technical ability, confidence, and physical fitness of the climber who supplied the rating.

Additionally, climbers who achieve first ascents sometimes underrate the difficulty or risk of the climbing route.

Therefore, be warned that you must exercise your own judgment on where a climbing route goes, its difficulty, and your ability to safely protect yourself from the risks of rock climbing.

Examples of some of these risks are: falling due to technical difficulty or due to natural hazards such as holds breaking, falling rock, climbing equipment dropped by other climbers, adverse weather conditions, failure of your own equipment, and failure or absence of fixed protection.

Here are some ways to use this guidebook more safely.

1. Consultation: You should always consult with other climbers about the difficulty and risks of a particular route before attempting it. Most local climbers are glad to provide advice on routes in their area; we suggest that you contact locals to confirm grades and safety of particular routes and to obtain first-hand information about the route of your choice.

2. Instruction: Most climbing areas have local climbing instructors and guides available. If you're new unfamiliar with climbing or unfamiliar with the area, we recommend that you hire an instructor or guide to learn safety techniques and to become familiar with the routes and hazards of the areas described in this book. Even if you are already proficient in climbing safety, occasionally hiring a guide is a sure way to raise your climbing standard and learn advanced techniques.

3. Fixed Protection: Some of the routes in this book may use fixed bolts and pitons that have

been pre-placed on the rock. Because of variances in the manner of placement, weathering, metal fatigue, the quality of the metal used, and many other factors, these fixed protection pieces should always be sceptically considered.

Never depend on a single piece of fixed protection for your safety, because you can never tell whether it will single-handedly hold your weight. In some cases, fixed protection may have been removed or is now missing.

However, climbers should avoid adding new pieces of fixed protection, unless they deem the pre-placed protection faulty and are looking to replace it. Existing protection can be tested by an experienced climber, to determine its strength. The ethics of climbing also strongly discourage adding bolts or drilled pitons to a pre-existing route, intending the route to be climbed as it was meant to be by the first ascent party.

Be aware of the following potential inaccuracies while using this guidebook:

1. Incorrect Descriptions of Routes:

If you're not sure where exactly your route is going, exercise your own judgment as to whether you should continue or retreat. Route descriptions and topos in this book could be inaccurate or misleading.

2. Incorrect Difficulty Rating:

A route might be harder than the rating indicates. Do not be lulled into a false sense of security by the grade.

3. Incorrect Protection Rating:

If you're climbing a route and you are unable to arrange adequate protection through the use of fixed pitons or bolts and by placing your own protection devices, do not assume that there is adequate protection available higher just because the route protection rating indicates so. Every route is potentially an X (a fall may be deadly), due to the inherent hazards of climbing—including, for example, failure or absence of fixed protection,

your gear, faulty protection placement, or improper use of climbing equipment.

4. Failure to Warn of a Particular Hazard:

Although an effort has been made to warn of known hazards on particular routes, this guide is by no means comprehensive, when it comes to potential risks and hazards involved in climbing. Climb carefully, at your own risk, and always be watchful.

There are no warranties, whether expressed or implied, that this guidebook is accurate or that the information in it is reliable.

There are no warranties of fitness for a particular purpose or that this guide is merchantable. Your use of this book indicates your assumption of the risk that it may contain errors and is an acknowledgment of your own sole responsibility for your climbing safety.

CLIMBING GUIDEBOOK
INTRODUCTION

View from Dardiza Crag

Once upon a time, back in the 2000's, a climbing revolution occurred in Ermionida, East Peloponnese. The British climber, **Jim Titt**, and the German **Inge Zaczek** went and equipped more than 200 routes on the area's excellent limestone rocks, with stainless steel bolts. They spent a lot of their time, money and effort for the development of sport climbing in the area and we are thankful for it. Since **2021**, the local climbing community **Climb Ermionida**, carried out maintenance works on the various crags and replaced several anchors, developed **three new crags**, many **new routes** and even new adventure **Multi-Pitch** routes by always using **UIAA certified gear**.

10

Sport Climbing crags suitable for all-year climbing.

300+

Sport Climbing routes of various grades.

73

Ermionida boasts an extensive coast line and offers many small coves with beaches.

3000+

ERMIONI - ARGOLIS

Areal view of Bisti - Ermioni

About Ermionida

Ermionida is a municipality in the Argolis regional unit, Peloponnese, Greece. The seat of the municipality is the town of Kranidi.

Ermioni is a small fishing town in Ermionida (Argolis) on the east of Peloponnese. The traditional taverns, the cafés, the paved streets, the beautiful houses and the crystal clear beaches around this area are some of the reasons which make this town is an interesting summer destination of Peloponnese.

While travelling around the area, you will have the chance to admire olive and pine trees along with plenty of bays with turquoise waters but also plenty of climbing crags.

Rock climbing around Ermionida and generally the region of Argolis is all on excellent **solid grey limestone**.

The majority of the routes are single pitch sport climbing routes, though there are some trad climbing routes as well.

However, all of the climbing areas are only partially developed, which means there is a massive opportunity to establish new routes in the area.

The area of Argolis gets **over 3,000 hours of sunshine per year** and is a popular holiday destination.

This also means that it is possible to rock climb virtually throughout the whole year in the region, even in the hot summer months, as some crags such as **Didyma** are found on higher elevation - as high as 1,000 m.!

History

Ermioni (Ancient Hermione) was originally founded by the mythical hero Ermionas and the ancient **Dryopian tribe**, and dedicated to the ‘messenger’ god, Hermes, and later, during the Mycenaean period, to Hermione, daughter of Helen and Menelaus, King of Sparta.

The area of Ermionis has been inhabited **since the Paleolithic period**, 40,000 years ago. Archaeological excavations at the Mesolithic Fragthi Cave unveiled the oldest complete human skeleton in Europe, dating back to 23,000 BC.

From **14th to 8th Century BC**, many settlements were established in the Southern Argolida region, as elsewhere in Greece. By 6th Century BC some of these villages had grown into real towns and large cities, such as **Hermione** (Ermioni), **Halieis** (Porto Heli), **Mases** (Kilada) and **Eileoi** (Iliokastro).

This laid the foundations for the archaic Hermionis Kingdom, ruled from the walled city of Hermione, located on the ancient Bisti peninsula. Hermione witnessed considerable prosperity during the

Hellenistic and Republican Roman periods, particularly after the Romans had taken control of the city, following the destruction of ancient Corinth in 146 BC.

When **Pausanias** visited Hermione, he described with admiration the lavish temples, sanctuaries, stadium, festivals, music contests and swimming races that brought so much glory to the ancient Kingdom of Hermionis and the surrounding area.

KATAFYKI GORGE

70 Routes ★★★★★ Katafyki, Ermionida

Crag location: 37.419650, 23.214109

Season: All year | **Walk in:** 1 minute

General information

An impressive gorge with a main face **over 150 m.** high and an impressive rock expanse along the river bed. Further up on the northern side there is a large area of rock- still undeveloped.

The main wall has an impressive overhanging middle section traversed mid-height by a large horizontal roof with holes. At first sight this can be somewhat overwhelming but once you're on, it turns out to be more amenable than one would have expected.

A very short approach (crag is just 20 meters off the road) and good protection from the elements make this area worth a visit.

Climbing in Katafyki is pleasant throughout the year, as the main wall is shaded after mid-day. There are **70 routes** here, among which, there are 4 multi-pitch trad routes reaching up to 123m. and 3 multi-pitch sport routes up to 150 m. in length.

Grades 5a to 7c+.

In a Nutshell

Exposure: North

Best Season: All year

Sun: From 09.00 to 11.00 (16.00 in summer)

Walk in: 1 minute

Water: None

Family Friendly: Yes

Pet Friendly: Yes

Camping: Around the chapel of Agios Nikolaos

Gear: 80 m. rope, 18 quickdraws

Equipped by: J.Titt, I. Zaczek, H. Weninger, J. Gstoettenmayr & family.

ACCESS TO THE CRAG
Access from Ermioni towards the crag of KATAFYKI

Access

Approaching **Kranidi** from the north, you will come across an intersection. Follow the signs to **Ermioni** and drive along the long straight section until you reach an inconspicuous stone chapel on your left and a small sign towards **Katafyki Gorge** (oriented towards the opposite direction

so it's easy to miss!). Take a hard left and follow the tight tarmac road for **about 3 km. until you come to an agricultural dirt road** with a sign pointing to Katafyki to the west. Another 500 m. of well trodden dirt road among olive groves and you are at the crag.

The Cave of Katafyki

The famous **Cave of Katafyki**, is mythologically noted as the entrance to **Hades**, from where **Hercules** unleashed his terrible Cerberus and the god **Pluto** led the daughter of the goddess **Demeter**, **Persephone**, to the underworld.

In the **Middle Ages** it was believed that the cave was a gate to Hell from which emerged all kinds of demons and fairies, haunts that made life difficult for passers-by.

PETROGERAKAS

8 Routes ★★☆☆☆ Katafyki, Ermionida

Crag location: 37.421957, 23.219936

Season: Late Autumn - Late Spring | **Walk in:** 35 minutes

General information

A new sport climbing crag was developed near **Ermioni** and specifically near the already well established climbing crag **Katafyki**.

The crag was developed and **equipped in early spring 2022** by **Vertical Art Greece** with main equipper **K. Grafanakis** and with a kind contribution of the local climbing community, **Climb Ermionida**.

The rock consists of grey-brown and red lime-

stone of very good quality but due to the fact the crag is newly developed, the rock on some routes might be a bit sharp. In total there are **8 routes** for all types of climbing, but was mainly developed for climbers taking their first steps on the vertical walls.

Best seasons to visit the **Petrogerakas Crag** is from late **Autumn** till late **Spring**.

Grades 5a to 6b+.

In a Nutshell

Exposure: South / South West

Best Season: Late Autumn - late spring

Sun: From 13.00 up to sunset

Good to know

Petrogerakas crag is located on the top of the wall northern of the main crag of **Katapyki**.

In order to reach the crag you have to **hike for about 30-40 minutes on a steep terrain** and therefore is advised to use **walking sticks** for the uphill, but mainly for the return and descent from the crag.

Crag location: 37.42021, 23.2179

Season: All year | **Walk in:** 15 minutes

General information

A new Multi-Pitch climbing crag was developed near **Ermioni** and specifically near the already well established climbing crag **Katafyki**.

The crag was developed and **equipped in 2022** by **Vertical Art Greece** with main equipper **K. Grafanakis** and with a kind contribution of the local climbing community, **Climb Ermionida**.

Pleiades crag, is located on the west wall in the ravine of Katafyki, and specifically, between

the **Katafyki Main Crag** and the **Petrogerakas Crag**.

As of **Summer 2023**, there are three fully bolted Multi-Pitch routes, **MAIA** (5c, 178 m.), **TAYGETE** (6b+, 205 m.) and **ALCYONE** (6a, 100m)

Both routes end at the top of the cliff with some stunning views toward **Ermioni** and the gulf of **Hydra** island.

MAIA

5c | 178 m.

Katafyki - Ermioni

1st Ascent: 01/05/2022

1st Ascensionists: K. Grafanakis & Olympus Mountaineering

Route description

Pitch 1 (5c - 35 m.)

The first pitch, and specifically the first **10 meters of the route**, are perhaps the **most demanding of the entire 178 m. of the climb.**

The route starts with a slight negative slab, but there are good holds and plenty of options for the feet. In addition, this first part, and generally the entire route is well equipped and very friendly to all type of climbers.

After the 4th bolt, you have to do a small **traverse towards the left**, so make sure to place an **alpine quickdraw** there (4th bolt), so you will minimise the rope drag while you will be climbing higher up.

Upon the traverse, the climb becomes easier (about 5b) and as soon you reach the ledge, you will easily spot the anchors.

ATTENTION: On the first ascent, about 2 meters left from the belay station, we spotted a hole with a Viber Berus snake in it. So, should you want to climb in the summer time, and on R1, pay a bit extra attention.

Pitch 2 (5b - 25 m.)

The second pitch starts right above the **R1** and moves with a small traverse to the left until you come on the slab. Like on Pitch 1, also for **Pitch 2 the crux (5b) is at the beginning**, thus you have to pay a bit attention while traversing.

As soon we reach the slab, the climb again is easier (around 5a) and we have to follow the ridge till the obvious ledge where another anchor point is placed.

The belay station is very comfortable and from that point and on you start to enjoy the stunning views bellow at the ravine of Katafyki.

Pitch 3 (5b - 30 m.)

The third pitch is continues in the same style as the last part of Pitch 2, which basically consists of following the ridge by climbing from a boulder to boulder with some small ledges till we find a slab with a bit negative start.

Before you enter the slab, there is a bolt that will make you feel safe and although it might seem a bit difficult to climb on top of the slab, there are enough holds for the hands. Upon that, we end up in another ledge, where **R3** is located.

The view from **R3** is really wonderful with a clear view of both **Katafyki crag** and **Petrogerakas crag**.

The maximum difficulty of this pitch is around **5b**.

Pitch 4 (5b+ - 48 m.)

The fourth pitch is again a very nice pitch where the difficulty is again at the beginning. In the first few meters, we have to climb in a dihedral and at some point we have to do a small traverse (2-3 steps) to the left in order to enter and continue our climb on the slab. Upon that, we continue to climb right on the ridge and this makes the climb to feel very special.

This is the lengthiest pitch and like the previous pitches is well equipped. Due to the fact this pitch is about **48 meters long**, make sure to **add some alpine quickdraws** in order to minimise the rope drag.

Pitch 5 (5a - 40 m.)

The fifth and final pitch of this great route, although is the easiest pitch, is perhaps the nicest too with a lovely "surprise" at the end. I won't describe much of this pitch, in order to not spoil the nice finishing of the Ridge

Though, what I can certainly attest, is that the **view from R5 is simply majestic**. Stunning views towards **Ermioni, Hydra, Dokos, Dardiza, Spetses** and of course a great "bird's eye" view towards the **Katafyki Climbing Crag**.

TAYGETE

6b+ | 205 m. ★★★★★☆ Katafyki - Ermioni

1st Ascent: 30/10/2022

1st Ascensionists: C. Rigas & Olympus Mountaineering

Route description

Pitch 1 (5c - 40 m.)

The first pitch, starts slightly to the left from the main ridge of **Pleiades** crag and the start is easy.

The route starts with a positive slab, and right after we enter to the zone of some overhangs, where there are good holds and plenty of options for the feet. On the **5th bolt**, where the **crux of the first pitch is located**, you have to climb an overhang and upon that, the climb becomes easier (about 5b) and as soon you reach the ledge, you will easily spot the anchors.

Pitch 2 (5c+ - 25 m.)

The second pitch starts right above the **R1** and moves with a small traverse to the right with small hold but enough options for the correct foot placement. The **crux (5c+)** of **Pitch 2 is located on the 4th bolt** and you have to make sure you clip in before you climb that part.

As soon you climb the crux, there is a positive slab with tiny holds, but the climb on that part is a bit easier (around 5b).

The belay station is very comfortable and from that point and on you start to enjoy the stunning views bellow at the ravine of **Katafyki** but also the rest of **Taygete** route.

Pitch 3 (5a - 30 m.)

The third pitch starts with a slight **exposure** and a great view to the south but also the north side of **Katafyki Ravine**. Although this pitch is not difficult (5a), there are a bit less bolts placed, thus one should climb this pitch carefully.

As soon you climb the ridge, you have to move towards the left, where you will locate R3 and the traverse pitch starts.

The view from **R3** is really wonderful with a clear view of both **Katafyki crag** and **Petrogerakas crag**.

Pitch 4 Traverse (5a - 40 m.)

The fourth pitch is perhaps the less pleasant of all pitches, due to the fact most of this **40 meters pitch** is a traverse on a ledge that moves across the crag. This pitch is not difficult and there is a small part of scrambling of a maximum difficult around 4c/5a but most of the pitch is simple hike.

Pitch 5 (6a+ - 40 m.)

The fifth pitch starts right above the R4 and is the **nicest pitch of Taygete route**, and perhaps one of the nicest and most complete pitches I have ever climbed. This is a 40 meters length continuous **6a+** pitch where you will come across different kind of climbing styles, from slab to crag and also a small overhang. The **crux of this pitch is located about 8 meters above the R4** and you need to climb along a crack where besides the bolts, you can certainly place other protection gear if you want.

Arriving at **R5**, you have splendid view towards the last pitch. Belay location is **less comfortable** compared to the other ones.

Pitch 6 (6b+ - 40 m.)

The sixth and final pitch, technically is the most demanding pitch, with a maximum difficulty of **6b+**. Though, the **crux** of this pitch and of the entire route consists of some moves that require good coordination and balance. Besides the crux, the rest of the pitch is much easier of a maximum difficulty of around **5c**.

As soon we reach the R6, we come across stunning views towards **Ermioni, Hydra, Dokos, Dardiza, Spetses** and of course a great "bird's eye" view towards the **Katafyki Climbing Crag**.

ALCYONE

6a | 100 m.

Katafyki - Ermioni

1st Ascent: 29/05/2023

1st Ascensionists: K. Grafanakis & Olympus Mountaineering

Route description

Pitch 1 (6a - 30 m.)

The initial pitch of **Alcyone**, situated a few meters to the right (south) of the main ridge of the **Pleiades crag**, proves to be the most challenging segment of the route.

The ascent commences with a positive slab, followed by the need to surmount overhangs. These overhangs offer moderate holds, requiring careful foot and body placement. The first pitch of **Alcyone extends approximately 30 meters**, presenting a continuous climb featuring a mix of slab and overhang sections.

Climbers are encouraged to follow the natural line of the rock, seeking the most intuitive path. Upon reaching the prominent ledge, the next step involves a traverse towards the left, where the anchors and R1 come into view.

The belay station situated on this **ledge offers both comfort and a delightful vantage point**, overlooking the **Katafyki** and **Petrogerakas** crags.

This pitch, in parts might contain some loose rocks, so be delicate while climbing.

Pitch 2 (5c - 25 m.)

Commencing just above **R1**, the second pitch demands a dynamic move to position your body correctly and securely clip in the **second bolt**. Once you conquer the initial section, a ledge greets you. From this ledge, a slight movement to the right leads to the **crux of the pitch**, rated at 5c. Be aware that this particular passage may induce a sense of discomfort due to the slight exposure and average rock quality. However, once you successfully navigate this challenging section, the remainder of the pitch becomes considerably easier. After reaching the ledge, a straightforward walk of approximately **8 meters** brings you to the belay station.

Rest assured, the belay station provides exceptional comfort, and from this vantage point, you gain clear visibility of the upcoming sections: **pitch 3 and pitch 4**.

Pitch 3 (5b - 20 m.)

To embark on the **third pitch**, you begin slightly to the right from the anchors, aiming for the prominent **dihedral**. While this section does not pose significant difficulty, ample holds and foothold placements are available. It is important to approach this segment with the mindset of climbing a dihedral, utilizing the natural features to your advantage.

After securing the **fifth bolt**, veer towards the right to ascend to the ridge's pinnacle. Although a slight sense of exposure may be felt, the subsequent moves unfold gracefully on remarkably solid rock.

While this pitch is the shortest among the four, it rewards climbers with delightful movements that perfectly align with its grade (5b).

Resting at **R3** provides a truly splendid view, encompassing a wonderful panorama. Moreover, this belay station offers both serenity and comfort, allowing climbers to savor the surroundings while regrouping for the continuation of the ascent.

Pitch 4 (5c - 25 m.)

As we embark on the **fourth and final pitch of Alcyone**, we once again encounter a captivating start on a rock of remarkable quality. The challenge on this pitch emerges right from the outset, persisting until the fifth bolt.

Within the initial **10 meters**, climbers must maintain a continuous and sustained ascent, facing a difficulty level of **around 5c, perhaps even approaching 6a**. Once the **crux of this pitch** is overcome, the climb gradually becomes easier, with a maximum difficulty of approximately 5a.

It is noteworthy that the **last anchor is not equipped with bolts but instead relies on a large tree**. Therefore, it is **crucial to carry slings with you**, ensuring the establishment of a secure anchor point.

Upon reaching **R4**, our journey to conquer **Alcyone**, one of the seven sisters, draws to a close.

DARDIZA

2 Routes ★☆☆☆☆ Dardiza, Ermionida

Crag location: 37.410556, 23.279167

Season: Late Autumn - Late Spring | **Walk in:** 2 minutes

General information

This is a tiny crag bolted by **Hans** and **Jeannette Weninger** and could also be considered a good location for bouldering.

Dardiza crag is recommended mainly for long-term visitors in the area who have already explored the other crags.

On the south face of the rock, there are two routes (George and Filia). The rest of the rock remains unexploited for the time being.

The access is short and easy and the views from the crag are simply stunning.

While the south-east face of this tiny crag offers solid rock quality, its south-west face has some loose rocks.

In a Nutshell

Exposure: South - South/East

Best Season: Late Autumn - Late Spring

Sun: 09.00 to sunset

Walk in: 2 minutes

Water: None

Family Friendly: Yes

Pet Friendly: Yes

Camping: Dardiza or Thermisia beach

Gear: 60 m. rope, 4 quickdraws

CASTLE THERMISIA

36 Routes ★★★★★ Thermisia, Ermionida

Crag location: 37.421025, 23.303320

Season: Late Autumn - Late Spring | **Walk in:** 10 minutes

General information

The **Castle of Thermisia** appears in the written sources, as Trémis, for the first time in 1347, in the will of Gautier II de Brienne, Count of Lecce, *de jure* Duke of Athens, and *de facto* Lord of Argos and Nauplia. Surprisingly the castle is not referenced in an otherwise comprehensive list of frankish castles in Greece dating from 1377.

It perks atop an imposing cliff overlooking the coast and the village of **Thermisia**.

Close inspection of the rock reveals an even more daunting prospect than a first glance might suggest. Big, red, bulging and holdless seems to sum it up.

This is actually a great place to visit with a super view over the coast, a ruined castle to explore and a real classic line, **New Order**, which takes you up an unfeasibly overhanging wall at only 6a+. The cliff is floodlit during the summer months and this would give a superb photo opportunity!

In a Nutshell

Exposure: South - South/West

Best Season: Late Autumn - Late Spring

Sun: From 10.00 to sunset

CAVES OF FRAGTHI

14 Routes ★★★★★ Koilada, Ermionida

Crag location: 37.422520, 23.131178

Season: Late Autumn - Late Spring | **Walk in:** 20 minutes

General information

An enormous series of caverns just above the sea, with large gaping openings allowing enough light to climb by. At night the area, as a renown archaeological site, is well-lit, giving a superb climbing experience. Apart from being worth a visit in its own right, some of the climbing here is outstanding.

Of course, on rainy days, this is the place to be, with some entertaining and unique climbing into the 20 m. deep escarpments down to the very own bowels of the cavern.

The potential for enormous roof climbs is obvious but hardly tapped. **Karsten Oelze** has shown the way with his recent efforts, but there is plenty more to do. Outside the cave, on the cliffs above the beach, there are 5 routes which offer some good sport climbing in the lower grades.

The highlight of a visit to the **Caves of Fragthi** is, without a doubt, the climbing experience in the third cavern.

In a Nutshell

SUNCASTLE CRAG

10 Routes ★★☆☆☆ Ermionida, Argolis

Crag location: 37.416520, 23.250795

Season: Late Autumn - Late Spring | **Walk in:** 3 minutes

General information

A new sport climbing crag was developed and established in close proximity to **Iliokastro** village, approximately **5 km away from Ermioni**.

The crag was developed and equipped by the **Climb Ermionida** during the winter/spring season of 2023.

The rock formation is primarily composed of high-quality grey limestone and good quality red limestone, although some routes may have sharp

rock formations due to the crag's recent development.

The crag offers **10 routes suitable for climbers of all skill levels**, with grades ranging from **5a to 6b+**.

The optimal time to visit the **SunCastle Crag** is during **late autumn through late spring**, with easy access requiring only a brief hike.

ROCK OF AGES

39 Routes ★★★☆☆ Rado, Ermionida

Crag location: 37.499417, 23.237611

Season: All year | **Walk in:** 10 minutes

General information

Rock of Ages, is a nice little cliff in an idyllic setting and highly recommended for those who are not only interested in pushing up their grades but also in their surroundings. A small ravine with lush vegetation, good rock and varied climbing offer a very pleasant day out.

Rock of Ages was mainly developed and bolted by the legendary climber and route setter **Jim Titt** and **I. Zaczek**. All routes are rather demanding and almost on all routes come with runouts.

Thus, the **Rock of Ages** is mainly for experienced climbers that feel comfortable with onsighting **6a+/6b**.

The highlights of **Rock of Ages** include the spectacular and photogenic overhanging **Mr Cool at 5c+** and the weird **Pull of the Sun at 6b**, which climbs up inside the cleft splitting the cliff face.

Plenty of potential on this undeveloped rock make it well worth a visit.

Best Season: All year

ERMIONI - ROCK OF AGES
ACCESS TO THE CRAG
 Access from Ermioni towards the crag of ROCK OF AGES

Access

Approaching from **Ermioni**, turn right on the saddle before **Didyma** (Sign: Iliokastro). After 4,4 km, shortly before reaching a small church on the right side, turn left. Continue on this tarmac road for 2,8 km. Then go right on a small tarmac road for 1,9 km (the last 100 m. are on gravel). Turn left on concrete terrain and follow the road downwards.

Keep driving for another 800 m. towards a wide rock formation. Just before you reach it turn right and follow the road as it coils up to the saddle.

Turn left and follow this road for **about 750 m.** until you see the small ravine on the left. Park a few meters after the valley.

09.	Furioso	6b	29 m.	
10.	Stoned	6b	29 m.	
11.	Gammel Hans	6c+	29 m.	

Highlights

One of the few cliffs in Argolis that offers easy tufa climbs with the continuously overhanging **Mr Cool** at 5c+ being one the highlights, albeit a rather strenuous one!

Other highly enjoyable, if rather unusual, routes include **Dance With Monsters** and the weird **Pull Of The Sun**, which climbs up inside the cleft splitting the cliff- a real adventure.

All routes offer minimum bolting, so be ready for some run outs.

DIDYMA

67 Routes ★★★★★☆ Mt. Didimo, Ermionida

Crag location: 37.475354, 23.2121502

Season: All year | **Walk in:** 5 minutes

General information

Oros Didimon, or “**Didyma**”, is a major crag of Argolis. Excellent access, superb rock, good orientation and magnificent views add up to one of the best sport climbing venues in Greece.

Climbs for every level of ability and perfect access to the top for setting up top ropes. There is also a more technical climbing area, on steep gray walls.

Crag development so far has focused on the first 250 m. of the cliff (sector “summertime”),

producing around **70 routes in the 4th, 5th, 6th and 7th grades** with potential for several more in the higher grades.

A good family cliff with some beginner routes with some extra bolts on specific routes.

Didyma crag is certainly one of the best crags in the Ermionida region.

In a Nutshell

Exposure: South - South/West

Best Season: All year

Sun: From 08.00 to sunset

Walk in: 5 minutes

Water: Yes

Family Friendly: Yes

Pet Friendly: Yes

Camping: At the parking lot

Gear: 60 m. rope, 14 quickdraws

DIDYMA

Crag Location: 37.475354, 23.212150

Best Season: All year

Access

Driving from Ermioni, after about 20 km. (37.500984, 23.190837), turn right on the saddle on the highest passage that leads to Mt. Didimo.

Follow the bumpy tarmac road that will lead you towards the peak of **Mt. Didimo**.

At point **37.476086, 23.212998** right before the antennas, you can park your car safely.

By now, you should be able to see the rock cairns and a goat trail that will lead you to the crag. The views while approaching the crag are stunning.

#	Name	Grade	M.	✓
01.	Huggy Bear	6a	14 m.	
02.	Little Wall	6b	14 m.	
03.	Little Chimney	4b	14 m.	
04.	Jump	6a	14 m.	
05.	Hole	6b	14 m.	
06.	Little Crack	6a+	14 m.	

Good to know

These are the first routes of **Didyma crag**, that are of medium grade.

These first routes are rather short and the climbing style resembles more to bouldering than anything else.

The rest of the crag offers longer routes, up to **20 meters** high and of higher grades up to **8a**.

#	Name	Grade	M.	✓
01.	Ginger	4b	15 m.	
02.	Teen Dream	5c	15 m.	
03.	A Funny Turn	5c	15 m.	
04.	Direct	6a	15 m.	
05.	A Good Crack	5a	15 m.	
06.	Here Comes The Weekend	5a	15 m.	
07.	First Corner	4c	15 m.	
08.	First Arete	4c	15 m.	

Good to know

The routes **First Arete**, **First Corner**, **Here Comes the Weekend** and **A Good Crack** are all using extra bolts suitable for beginners and/or kids.

ATTENTION on the loose rock in the middle of the route **Here Comes the Weekend**. It is a very dangerous large block, so if you climb this route, do not use it.

BOULDERING

25 Routes ★★★★★☆ Thermisia, Ermionida

Crag location: 37.417739, 23.305997

Season: All year | **Walk in:** 5 minutes

General information

Few hundred meters below the remarkable **Castle Thermisia crag**, there is a field full of olive groves and some magnificent boulders.

There are about **10 major boulders** and several smaller that offer plenty of bouldering opportunities.

The access to the bouldering field is rather easy and the **walk-in is less than 5 minutes**.

In addition, this bouldering field is right in the middle of the various crags of the area, so you can give it a shot and try some problems or simply take a break from climbing and take a moment to relax, while moving from one crag to another.

The area is **family and pet friendly**, offers great views towards **Hydra** and **Dokos** islands.

In a Nutshell

Exposure: South

Best Season: Autumn - Spring

Sun: From 10.00 to sunset

Walk in: 2 minutes

ERMIONI - THERMISIA
ACCESS TO THE CRAG
Access from Ermioni towards THERMISIA

Access

Driving from **Ermioni towards Galatas** along the coastal road, you will be able to identify the remarkable rock of **Castle Thermisia** (alt. Lizard Rock).

Right before Thermisia, at point **37.410227, 23.311890** turn left and on the first side road

turn again left. Follow the paved road until you see a small chapel. At that point (37.416066, 23.313374) turn left again and drive up to the tarmac road.

You can park your car here: **37.417428, 23.307794**
